Percentage of work:

1. Out of 100, what percentage of the project do you think you contributed to?

50%

2. Describe your individual contribution to the project (max 1/2 page).

We were a group of 2 people for this project, and I believe we distributed the workload evenly.

The project might have been a bit ambitious for a group this small as we were short on time, but we were a group of three at the time of pitching the project and the goals we had stayed consistent after one of the members decided to take the continuous evaluation so in the end both Jordi Polo and I had to work a bit extra.

The project mainly consists of two halves; an extensive explanation of non-fungible token functionality and history and a practical implementation in the form of a smart contract deployed on an EVM-compatible blockchain.

We developed the two halves of the project simultaneously, each member taking a leading role in one of them while overseeing and giving feedback to each other, and since I was personally more proficient in Solidity coding through our learnings in lab classes i took a leading role in the development of Crypto Croakers (sections 6 and 7 of the work).

All of the code implementation and project documentation was done exclusively by me, I also handled (partially) the creation of assets and managed all the accounts in the services used to create, deploy and use the contract (metamask, etherscan, infura, pinata, nft-inator, opensea) along with executing the procedure. For the theoretical half of the project I contributed to general informative research, writing corrections and terminology glossary/definitions.
